                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-09-312-183A-11/c

US-09-312-183A-11/c

Patent No. 6303766

GENERAL INFORMATION

APPLICANT: GRABAU, ENIZABETH A.

APPLICANT: GRABAU, ENIZABETH A.

APPLICANT: GRABAU, ENIZABETH A.

TITLE OF INVENTION: SOYBEAN PHYTASE AND NUCLEIC ACID ENCODING THE SAME

TITLE PEFERNOE: 6617-13

FILE REFERENCE: 6617-13

CURRENT APPLICATION NUMBER: US/09/312,183A

CURRENT FILING DATE: 1999-05-14

NUMBER OF SEQ ID NOS: 24

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 11

LENGTH: 19
                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NAME/KEY: misc_feature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-08-079-110A-6

US-08-079-110A-6

Sequence 6, Application US/08079110A

Sequence 6, Application US/08079110A

Patent No. 5571711

GENERAL INFORMATION:

APPLICANT: Thierry, Coulie, Pierre; Renauld, Jean-Christophe

TITLE OF INVENTION: ISOLATED NUCLEIC ACID MOLECULES

TITLE OF INVENTION: CODING FOR BAGE TUMOR REJECTION ANTIGEN PRECURSORS

NUMBER OF SEQUENCES:

ADDRESSEE: Felfe & Lynch

STREET: 805 Third Avenue

CITY: New York City

STATE: New York

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GENERAL INFORMATION:

Patent No., 5686272

GENERAL INFORMATION:

APPLICANT: Ronald L. Marshall
APPLICANT: John J. Carrino
APPLICANTON: AMPLIFICATION
NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS:
ACRESPONDENCE ADDRESS:
ATABE: Illinois
CONTRY: USA
ZITE: ADDRET PREM.
STATE: Illinois
CONTRY: USA
CONFUTEN: READABLE FORM:
MEDIUM TYPE: Floppy diskette
COMPUTEN: Macintosh
OPERATION SYSTEM: System 7.0.1
SUFFWARE: Microsoft Word 5.1a
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/356,287
FILING DATE: ASSETT INFORMATION:
APPLICATION NUMBER: US 07/891,543
FILING DATE: 29 NAY 1992
ATTORNEY/ARRAT INFORMATION:
APPLICATION NUMBER: 37,477
REGISTRATION NUMBER: 37,477
REFERENCE/ODOCKET NUMBER: 5172.US.P1
TELECOMMUTION FOR SEQ ID NO: 24:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-08-49-99-1-33/G
Sequence 33, Application US/08649991
Patent No. 5919462
GENERAL INFORMATION:
APPLICANT: Roques, Pierre
TITLE OF INVENTION: NUCLEIC ACID FRAGMENTS DERIVED FROM THE
TITLE OF INVENTION: MAPPLICATIONS AS REAGENTS FOR EVALUATION OF THE RISK OF
TITLE OF INVENTION: MATERNOFOETAL TRANSMISSION OF HIV-1
NUMBER OF SEQUENCES: 130
CORRESPONDENCE ADDRESS:
ADDRESSE: MARGAN: LEE, E BOCKIUS LLP
STREET: 1800 M Street, N.W.
COUNTRY: USA
ZIP: 20036-586
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC COMPathle
COMPUTER: IBM PC COMPathle
COMPUTER: C-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                APPLICANT: Roman Urfer
TITLE OF INVENTION: HUMAN LIK RECEPTORS AND NEUROTROPHIC FACTOR
TITLE OF INVENTION: INHIBITORS
TITLE OF INVENTION: INHIBITORS

Sequence 10, Application US/08232081B

Sequence 10, Application US/08232081B

Patent No. 5868152

GENERAL INFORMATION:
APPLICANT: NAKATANI, TOMOYUKI
APPLICANT: NOGUCHI, HIDEYUKI
APPLICANT: NOGUCHI, HIDEYUKI
APPLICANT: NOGUCHI, HIROSHI
AITLE OF INVENTION: HUMANIZED B-BIO
NUMBER OF SEQUENCES: 42

CORRESPONDENCE ADDRESS:
ADDRESSE BIRCH, STEWART, KOLASCH AND BIRCH
STREET: PO BOX 747

COTY: FALLE CHURCH
                                                                                                      LENGTH: 19
TYPE: NUCLEIC ACID
STRANDEDNESS: single
TOPOLOGY: linear
MOLECULE TYPE: Other nucleic acid (synthetic DNA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Patentin Release #1.0, Version #1.30

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 22, Application US/10112547

Patent No. 6579674

GENERAL INFORMATION:

Mathews, Michael B.

Katze, Michael G.

Watson, Julia C.

TITLE OF INVENTION: METHOD FOR SELECTIVE INACTIVATION
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
SURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/590,897A
FILING DATE: 24-JAN-1996
CLASSIFICATION: 435
ATCANSIFICATION: 435
ATCANSIFICATION: MARBER: 38-827
REFERENCE/DOCKET NUMBER: 38-825
INFORMATION FOR SEQ ID NO: 32: SEQUENCE CHARACTERISTICS:
LENGTH: 15 base pairs
TYPE: nucleic acid
STRANDEDNESS: double
TOPOLOGY: linear
MOLECULE TYPE: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CORRESPONDENCE ADDRESS:

Sequence 5814, Application US/09371772B

Patent No. 6566127

Patent No. 6566127

GENERAL INFORMATION:

APPLICANT: Riboryme Pharmaceuticals, Inc.

APPLICANT: Riboryme Pharmaceuticals, Inc.

APPLICANT: Stinchcomb, Dan

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

FILE REFERENCE: MEHBOO, 876-J (1377/198)

CURRENT APPLICATION NUMBER: US/09/371,772B

CURRENT APPLICATION NUMBER: US 60/005,974

PRIOR APPLICATION NUMBER: US 60/005,974

PRIOR PILING DATE: 1995-00-108

FRICK FILING DATE: 1996-01-08

NUMBER OF SEC ID NOS: 14225

SOFTWARE: PatentIn version 3.0

SEQ ID NO 5891

ASSURED IN Application US/0869805

Sequence 10. Application US/0869805

Patent No. 5869288

PAPLICANT: Chapman, Martin

APPLICANT: Arrida, L. Karla

TITLE OF INVENTION: Molecular Cloning of Cockroach

TITLE OF INVENTION: Allergens, Amino Acid and Nucleotide Sequences Therefore,

TITLE OF INVENTION: and Recombinant Expression Thereof

NUMBER OF SEQUENCES: 10

CORRESPONDENCE ADDRESS:

ADDRESSEE: P.C.

STREE: 1755 S. Jefferson Davis Highway, Suite 400

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2507, Application US/08585684B

Patent No. 5877021

GENERAL INFORMATION:

APPLICANT: Stinchcomb, Daniel T.

APPLICANT: McSwiggen, James

ITIE OF INVENTION: METHOD AND REAGENT FOR THE

TITLE OF INVENTION: METHOD AND REAGENT FOR THE

TITLE OF INVENTION: INDUCTION OF GRAFT TOLERANCE

TITLE OF INVENTION: AND REVERSAL OF INMUNE RESPONSES

NUMBER OF SEQUENCES: 2751

CORRESPONDENCES: 2751

ADDRESSEE: LYON & LYON
